

Figures

1.1	The bunch structure of the LHC beam, from [9].	3
1.2	An exploded view of the CMS detector.	8
1.3	Material thickness in radiation lengths after the ECAL, HCAL, and at the depth of each muon station as a function of pseudorapidity. The thickness of the forward calorimeter (HF) remains approximately constant over the range $3 < \eta < 5$ (not shown).	10
1.4	Material thickness in interaction lengths after the ECAL, HCAL, and at the depth of each muon station as a function of pseudorapidity. The thickness of the forward calorimeter (HF) remains approximately constant over the range $3 < \eta < 5$ (not shown).	10
1.5	The muon momentum resolution versus p using the muon system only, the inner tracker only, or both ("full system"). a) barrel, $ \eta < 0.2$; b) endcap, $1.8 < \eta < 2.0$	11
1.6	Layout of one quarter of the CMS muon system for initial low luminosity running. The RPC system is limited to $ \eta < 1.6$ in the endcap, and for the CSC system only the inner ring of the ME4 chambers have been deployed.	12
1.7	ECAL supermodule energy resolution, σ_E/E , as a function of electron energy as measured from a beam test. The upper series of points correspond to events taken with a 20×20 mm ² trigger and reconstructed using a containment correction described in Section 4.3.2.2. The lower series of points correspond to events selected to fall within a 4×4 mm ² region. The energy was measured in an array of 3×3 crystals with electrons impacting the central crystal.	15
1.8	The jet transverse energy resolution as a function of the simulated jet transverse energy for barrel jets ($ \eta < 1.4$), endcap jets ($1.4 < \eta < 3.0$) and very forward jets ($3.0 < \eta < 5.0$). The jets are reconstructed with the iterative cone $R = 0.5$ algorithm. See Section 11.4 for further details.	18
1.9	The tracker layout (1/4 of the z view).	19
1.10	Layout of pixel detectors in the CMS tracker.	20
1.11	Resolution of several track parameters for single muons with transverse momenta of 1, 10 and 100 GeV/ c (upper) transverse momentum, (lower left) transverse impact parameter, and (lower right) longitudinal impact parameter.	22
